

CHAPTER 58

Digestive-System Cancers, Females, 1940-1988

● In Table 58-A, Column A shows that the female National MortRate from Digestive-System Cancers fell in half in the 1940-1988 period. Box 1 shows that such rates fell much more in the TopTrio than in the LowTrio. Please see the text in Chapter 57.

● It is noteworthy that in the 1940-1988 period, female National MortRates decline for Digestive-System Cancers, rise for Respiratory-System Cancers, and remain steady for Breast Cancers. These very different behaviors are consistent with high Fractional Causation by medical radiation for all three groups of cancers, throughout the entire period. High Fractional Causation simply means that medical radiation has been a NECESSARY co-actor for most of the fatal cases, whether the MortRate was rising or falling or flat.

● An additional concept is relevant. The impact on MortRates of a carcinogen, per unit, almost certainly varies with the levels of its co-actors. If the co-actors with medical radiation rise for Respiratory Cancers, while other co-actors for Digestive Cancers fall, then each unit of medical radiation would become more likely than previously to produce Respiratory Cancers, and less likely than previously to produce Digestive Cancers --- "all other things being equal."

Box 1, Chap. 58
Digestive-System Cancers, Females: Post-1940 Change in MortRates by Census Trios

1960 vs. 1940, by Trios: Col.D expresses change by ratios. Col.F expresses change by subtraction.

1988 vs. 1940, by Trios: Col.I expresses change by ratios. Col.K expresses change by subtraction.

MRs change inversely with PP. High-PP Trio has lowest growth-factor. Low-PP Trio has highest growth-factor.

Part 3-A.

Calculation of Fractional Causation
from Averaged PhysPops

- Nonradiation rate is Adjusted Constant (Part 2, Col.C) = 4.4992
- Radiation rate is Natl Adjusted MortRate (Part 1, Col.G = 20.4769)
minus Nonradiation rate (4.4992) = 15.9777
- 1988 Fractional Causation is radiation rate (15.9777) divided by OBSERVED Natl MR Part 1, Col.C= 23.5 = 0.68

Part 3-B.

Calculation of Fractional Causation
from 1940 PhysPops

- Nonradiation rate is Adjusted Constant (Part 2, Col.E) = 4.6537
- Radiation rate is Natl Adjusted MortRate (Part 1, Col.G = 20.4769)
minus Nonradiation rate (4.6537) = 15.8232
- 1988 Fractional Causation is radiation rate (15.8232) divided by OBSERVED Natl MR Part 1, Col.C= 23.5 = 0.67
